

LETTER OF RECOMMENDATION

To Whom It May Concern,

I am pleased to recommend Mr. J M N P Sai Preetam, whom I have known for the past two years in my capacity as Technical Manager – Procurement and Supply Chain (SMAI) at Micron Technology. During this period, I have worked closely with him on multiple data, analytics, and AI-driven initiatives and have consistently been impressed by his technical abilities, learning agility, and professional maturity.

Sai Preetam has a strong foundation in Python, SQL, cloud-native systems, and data-driven analytics, coupled with an exceptional ability to quickly learn and apply new technologies. While working on automation initiatives for contract data extraction, he independently explored and evaluated multiple OCR libraries and large language models to design a robust pipeline that significantly reduced manual data entry. He also rapidly familiarized himself with Google Cloud Platform services, including Kubernetes, Cloud Run, Pub/Sub, and Vertex AI, and successfully deployed production-grade automation workflows.

On another occasion, Sai Preetam learned Angular from scratch and delivered a complete analytics application in under a week, which was subsequently deployed to production. He applied sound system design principles such as caching, pagination, and performance optimization to ensure scalability and efficiency. From backend data ingestion and transformation using Python and SQL to business-facing visualizations using Tableau, he consistently delivered end-to-end analytics solutions with clarity and precision.

Sai Preetam approaches his work with a strong sense of ownership and responsibility. He invests time in understanding both the business context and underlying data—particularly in areas such as pricing analytics—before designing solutions. This thoughtful and structured approach has enabled him to make meaningful contributions to our analytics systems, directly supporting decision-making and driving measurable cost savings.

He is a dependable team member with strong debugging and problem-solving skills and is frequently relied upon to diagnose complex issues. He has resolved critical production challenges, including a major Kubernetes-based API deployment issue, by methodically identifying root causes and restoring stability.

Over time, I've seen clear growth in his communication and collaboration—he reflects on feedback, aligns better with stakeholders, and communicates more clearly before implementation. His adaptability and technical depth make him well prepared for advanced academic study. I strongly recommend Sai Preetam and am confident he will be a valuable addition to any rigorous graduate program.

Sincerely,

A handwritten signature in black ink that reads "Pragyan Acharya". The signature is written in a cursive, flowing style.

Pragyan Acharya

Manager, SMAI

Micron Technology
